

1. Weather Forecast Promise:

Imagine you're developing a weather app. Create a Promise that simulates fetching weather data for a user's location. Resolve the Promise with the weather condition and temperature after a simulated delay. Handle the case when the weather data cannot be fetched due to an error.

2. Online Shopping Promise:

You're building an online shopping website. Create a Promise that simulates checking if an item is in stock. Resolve the Promise with a success message if the item is available, and reject the Promise with an out-of-stock message otherwise.

3. Restaurant Reservation Promise:

Develop a Promise for booking a table at a restaurant. Resolve the Promise with a confirmation message if a table is available for the requested date and time. Reject the Promise with a message if the reservation cannot be made.

4. User Authentication Promise:

Imagine you're building a login system. Create a Promise that simulates user authentication. Resolve the Promise with a success message if the user's credentials are correct, and reject the Promise with an authentication failure message otherwise.

5. Movie Ticket Booking Promise:

Build a Promise for booking movie tickets. Resolve the Promise with a booking reference and seat details if the requested seats are available. Reject the Promise with a message if the seats are unavailable or invalid.

6. Delivery Tracking Promise:

You're developing a delivery tracking app. Create a Promise that simulates tracking the status of a package. Resolve the Promise with the current status (in transit, out for delivery, delivered) after a delay. Handle cases where the tracking information is not available.

7. Language Translation Promise:

Develop a Promise for translating text from one language to another. Resolve the Promise with the translated text if the translation is successful. Reject the Promise if the translation service is unavailable.

8. Social Media Post Promise:

Imagine you're working on a social media platform. Create a Promise that simulates posting a message. Resolve the Promise with a success message if the post is published, and reject the Promise if the post cannot be published due to an error.

9. Flight Booking Promise: Build a Promise for booking a flight ticket. Resolve the Promise with a booking confirmation if the flight is available and the payment is successful. Reject the Promise if the flight is unavailable or the payment fails.

10. Music Streaming Promise: You're creating a music streaming service. Develop a Promise that simulates playing a song. Resolve the Promise with the song details if it's available, and reject the Promise if the song cannot be played due to an error.
